PROJECT REPORT

Multi-Line Insurance Policy and Claims Management System

Project Information	Details
Project Title	Multi-Line Insurance Policy and Claims Management System
Platform	Salesforce CRM
Insurance Lines	Vehicle, Property, Life
Primary Users	Insurance Agents, Claims Adjusters, Senior Adjusters, Claims Managers
Core Technologies	Salesforce Lightning, Screen Flows, Record-Triggered Flows, Apex, LWC
Security	Permission Sets and State-Based Sharing Rules
Approval Threshold	High-value claims above ₹50,000

Executive Summary

The Multi-Line Insurance Policy and Claims Management System is a Salesforce-based solution designed to centralize and streamline the management of Vehicle, Property, and Life Insurance policies and claims. The solution replaces fragmented manual activities with structured Salesforce objects, Record Types, Field Sets, Screen Flows, Apex automation, Record-Triggered Flows, Approval Processes, Lightning Web Components, Permission Sets, and sharing rules.

The system supports guided policy quoting, product-specific policy information, premium calculation, VIN validation for vehicle policies, automated claim routing, a claims dashboard for adjusters, and multi-level approval for high-value claims. High-value claims above ₹50,000 are processed through Senior Adjuster and Department Manager approval stages. Role-based and state-based access controls support secure operational use.

The completed testing confirms the major business flows: VIN validation, automatic claim routing to the Auto Claims Queue, normal claim approval, high-value sequential approval, and rejection handling.

1. PROBLEM STATEMENT

An insurance carrier managing Vehicle, Property, and Life insurance requires a centralized Salesforce solution to reduce manual processing and standardize policy and claim operations.

1. Standardize and accelerate policy quoting and management.
2. Capture insurance-line-specific information.
3. Automate claim initiation and routing by policy type.
4. Provide centralized policy and claim visibility.
5. Automate high-value approval above ₹50,000.
6. Control access using Permission Sets and state-based sharing.

2. OBJECTIVES

- Design a flexible Policy and Claim data model for Vehicle, Property, and Life.
- Implement Record Types and Field Sets for product-specific data.
- Build an Auto Quoting Screen Flow.
- Validate VIN values using a 17-character rule.
- Calculate premium using Apex.
- Automatically route claims to the correct queue.
- Develop an LWC Claims Dashboard with filtering.
- Implement sequential Senior Adjuster and Department Manager approval.
- Provide Approve/Reject handling through a Screen Flow and Quick Action.
- Apply role-based Permission Sets and California/Texas sharing.

3. CHALLENGES

- Variable product data across Vehicle, Property, and Life.
- Guided quoting and validation.
- Consistent automated premium calculation.
- Correct queue routing.
- Sequential high-value approval.
- Operational dashboard visibility.
- Role and territory/state-based security.

4. SOLUTION APPROACH

The solution uses Salesforce as the centralized CRM platform. Policy and Claim objects provide the data model; Record Types and Field Sets support insurance lines; Screen Flows provide guided interaction; Apex performs premium and dashboard logic; Record-Triggered Flows automate routing and approval submission; LWC provides dashboard visibility; Permission Sets and sharing rules provide controlled access.

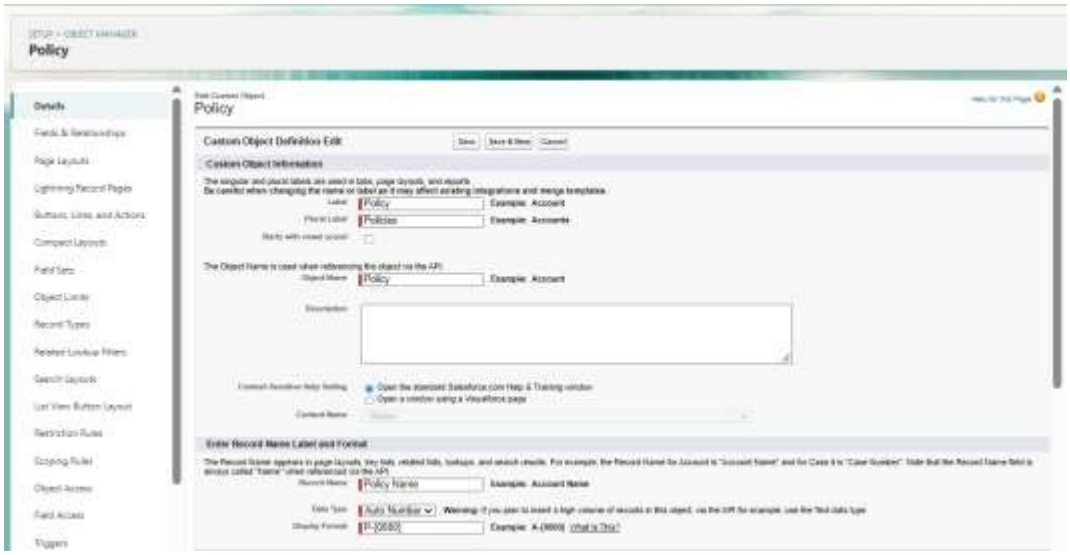

MILESTONES

5. MILESTONE 1: CORE DATA MODEL & POLICY CONFIGURATION

User Story 1: Creation of Custom Objects

1. Create Policy Custom Object

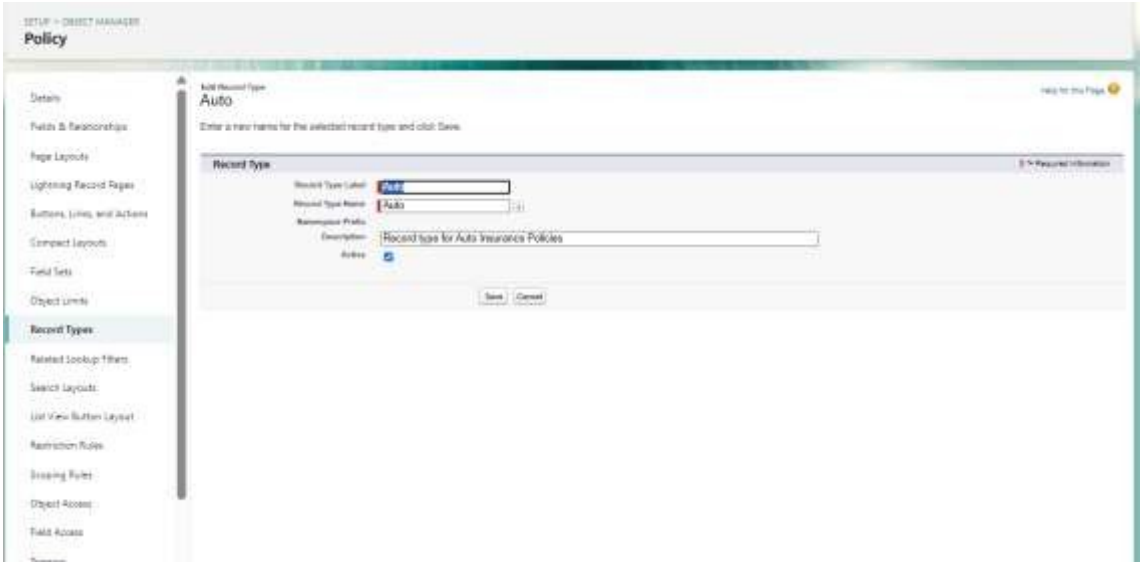

- Go to Setup → Object Manager → Create → Custom Object.
- Set Label : Policy
- Plural Label : Policies.
- Use Policy Number as the Auto Number record name.
- Enable required reporting, activities and field history options.
- Set Deployment Status to Deployed and enable search.
- Save the object.

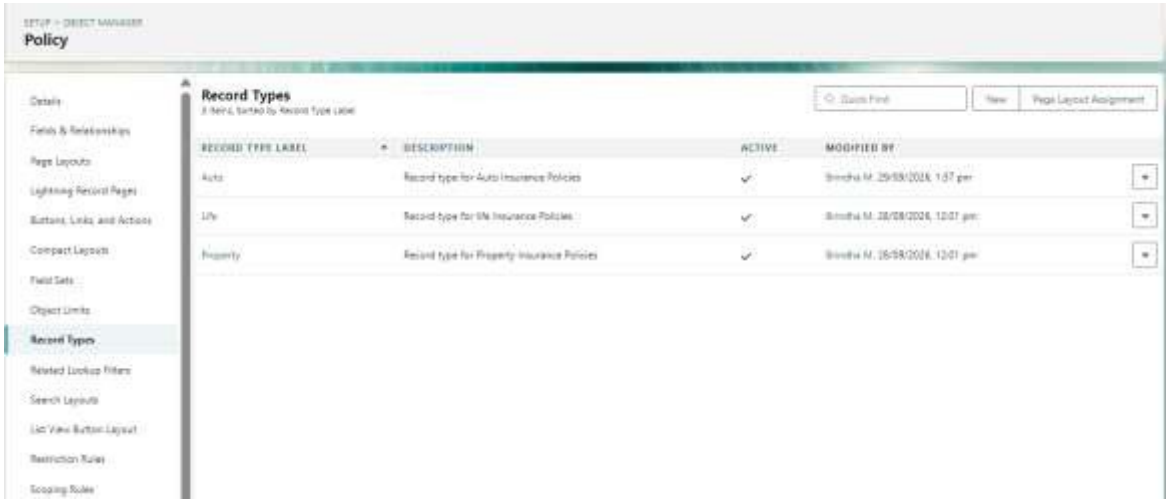

2. Define Policy Record Types

- Open Policy in Object Manager.
- Select Record Types → New.
- Create Auto/Vehicle, Property, and Life record types.
- Provide descriptions, activate them, and make them available to required profiles.
- Save each record type.

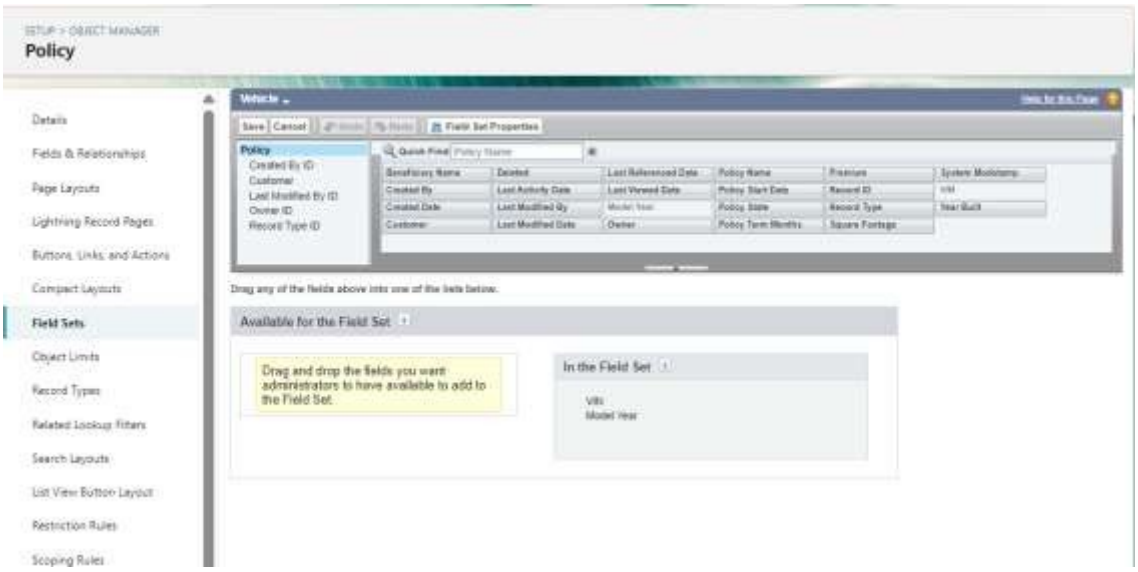

Repeat the same steps for creating the property and life record types as well.

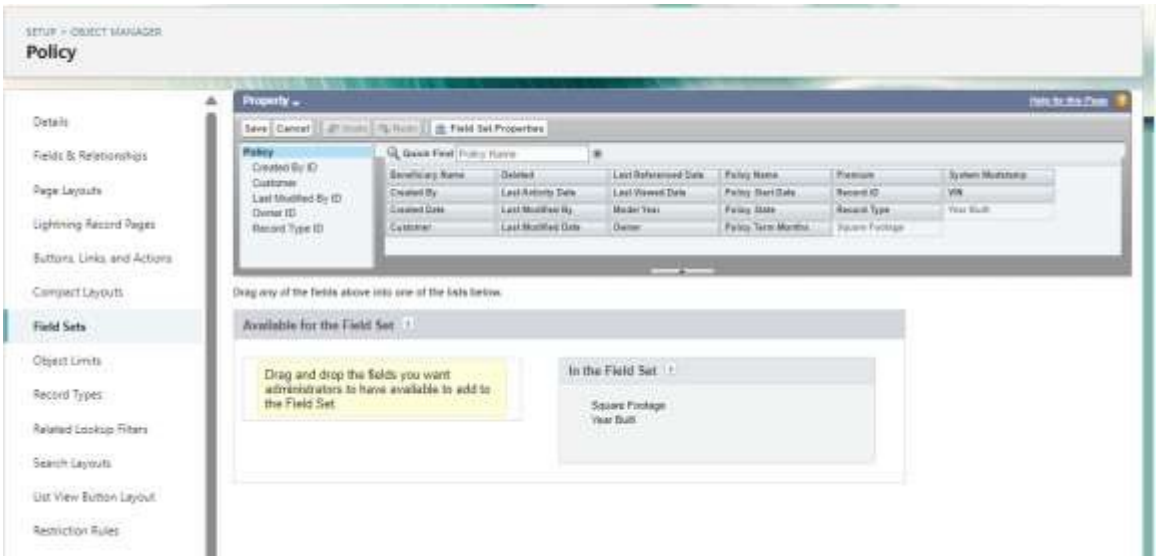

3. Create Policy Field Sets

Insurance Line	Fields
Vehicle / Auto	VIN, Model Year
Property	Square Footage, Year Built
Life	Beneficiary Name, Policy Term Months

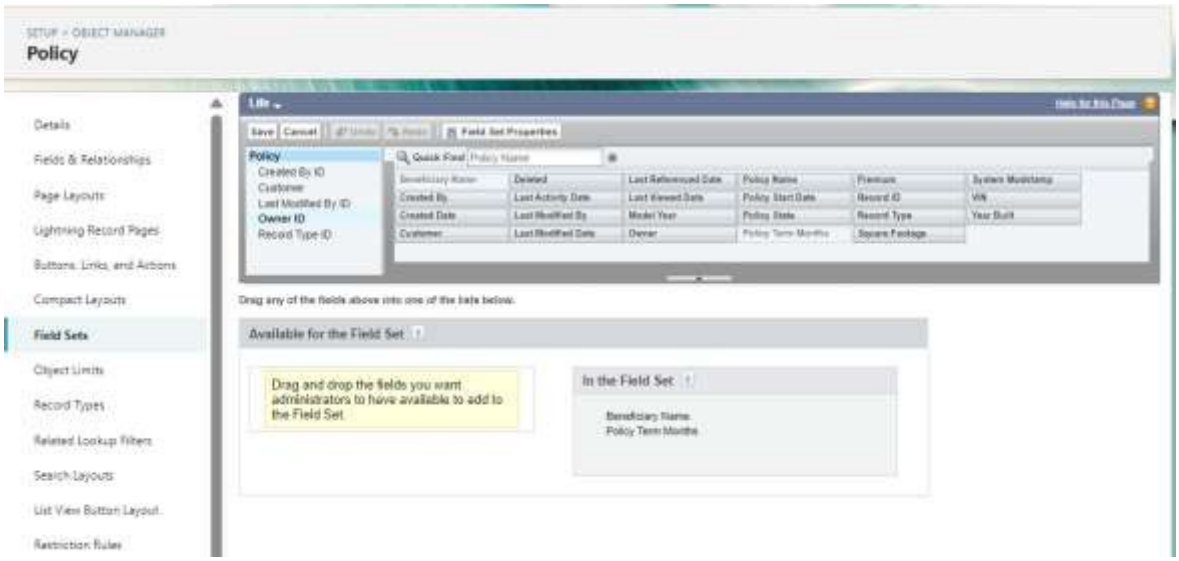

Create the vehicle field sets in the policy (object manager*)*

Create the Property field sets in the policy (object manager*)*

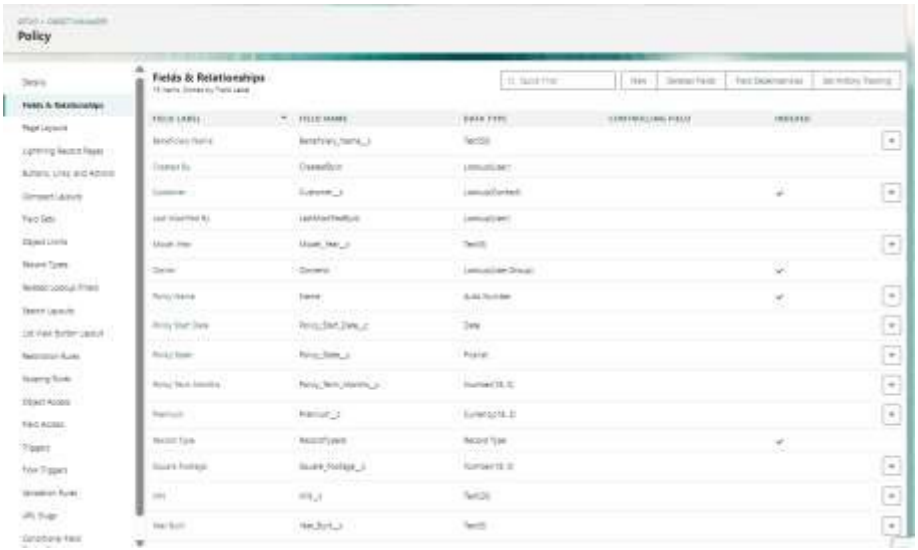

Create the Life field sets in the policy (object manager)

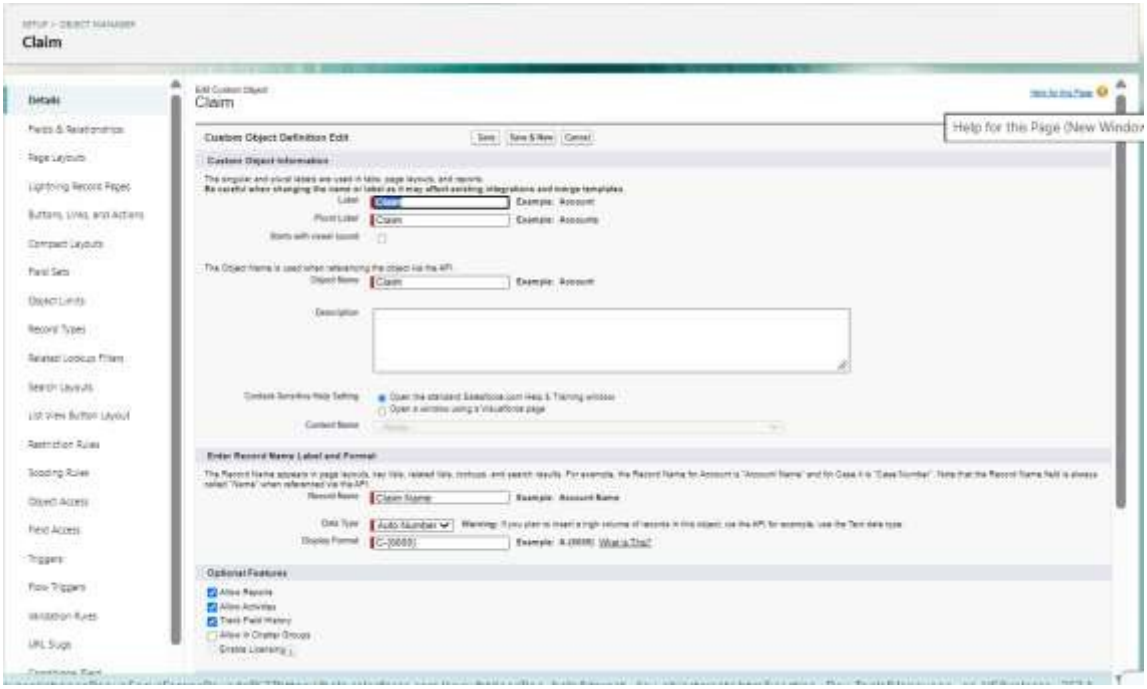

4. Policy Object Fields

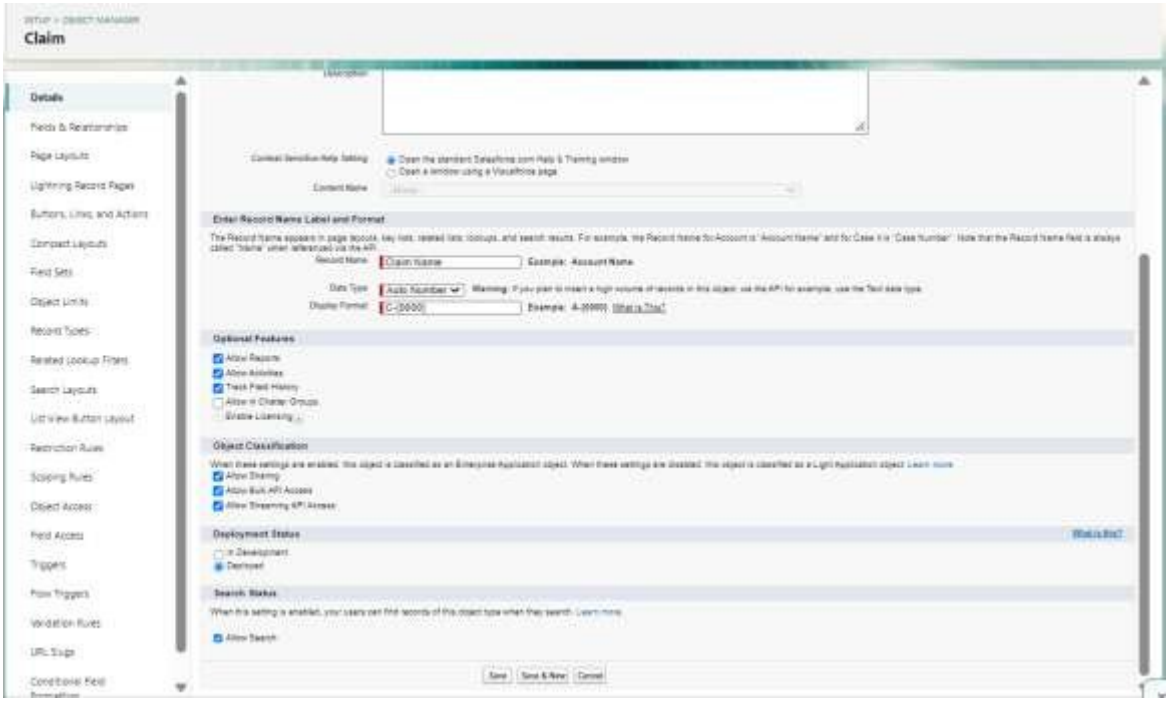

Field	Data Type
Beneficiary Name	Text
Customer	Lookup(Contact)
Model Year	Text
Policy Start Date	Date
Policy Term Months	Number
Premium	Currency
Square Footage	Number
VIN	Text
Year Built	Text
Policy State	Picklist

5. Create Claim Custom Object

- Open Setup → Object Manager → Create → Custom Object.
- Set Label as Claim.
- Configure Claim Number as Auto Number.
- Enable required reporting, activities, field history, deployment and search.
- Save.

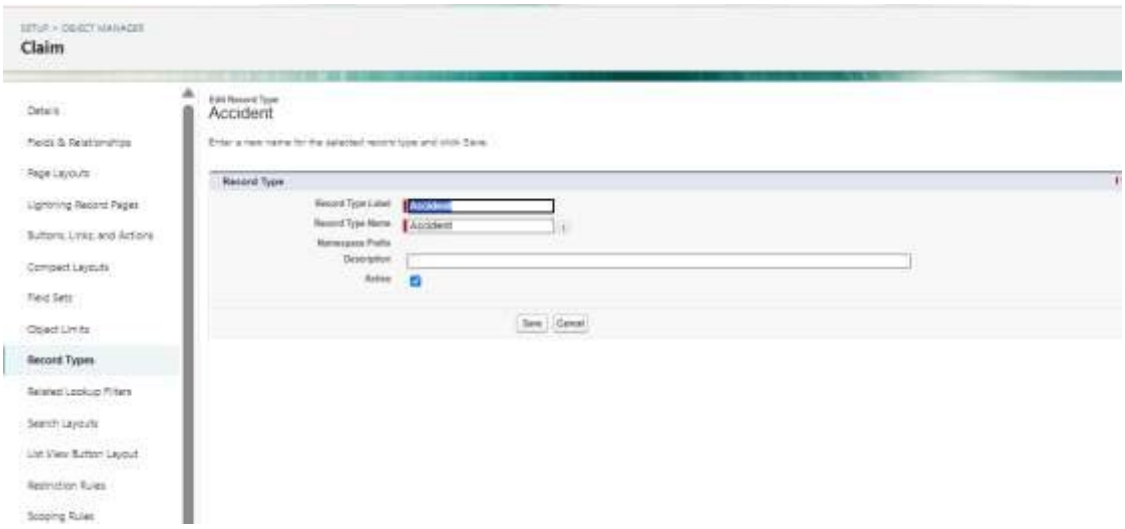

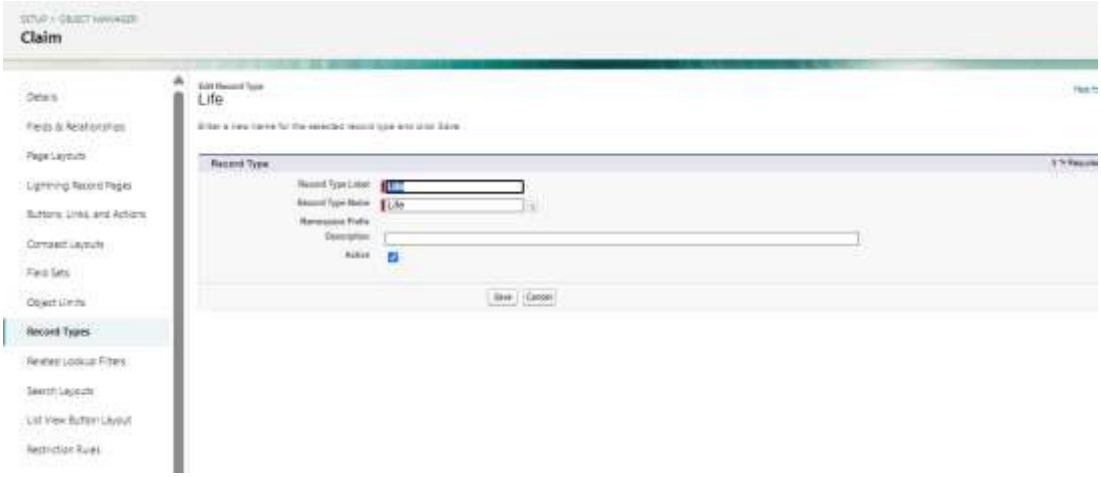

6. Claim Record Types

- Open Claim → Record Types → New.
- Create Accident, Property and Life record types.
- Activate and make available as required.
- Save.

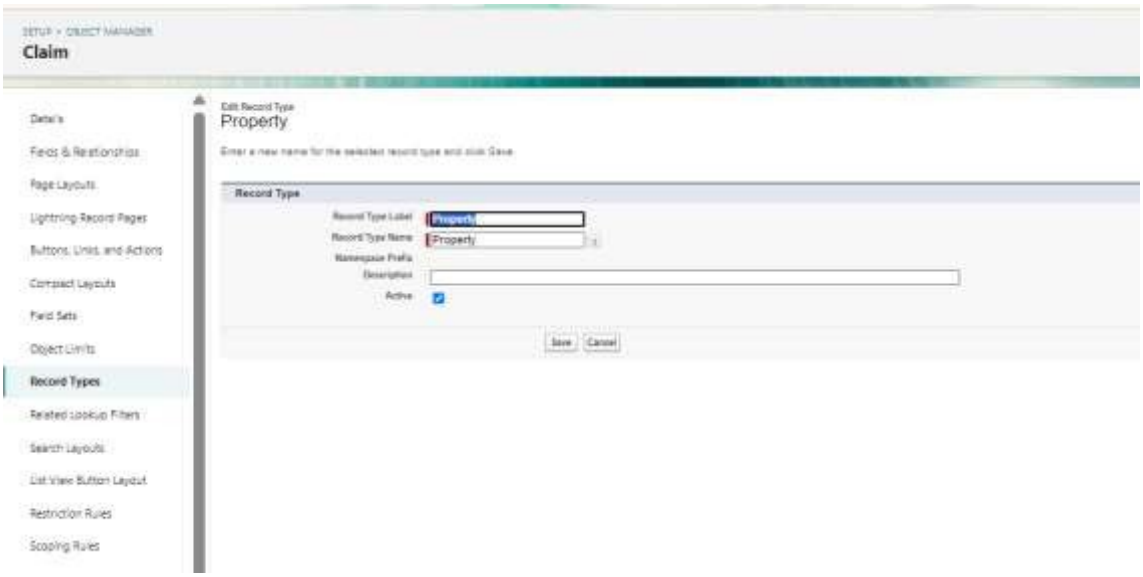

Accident:

Life:

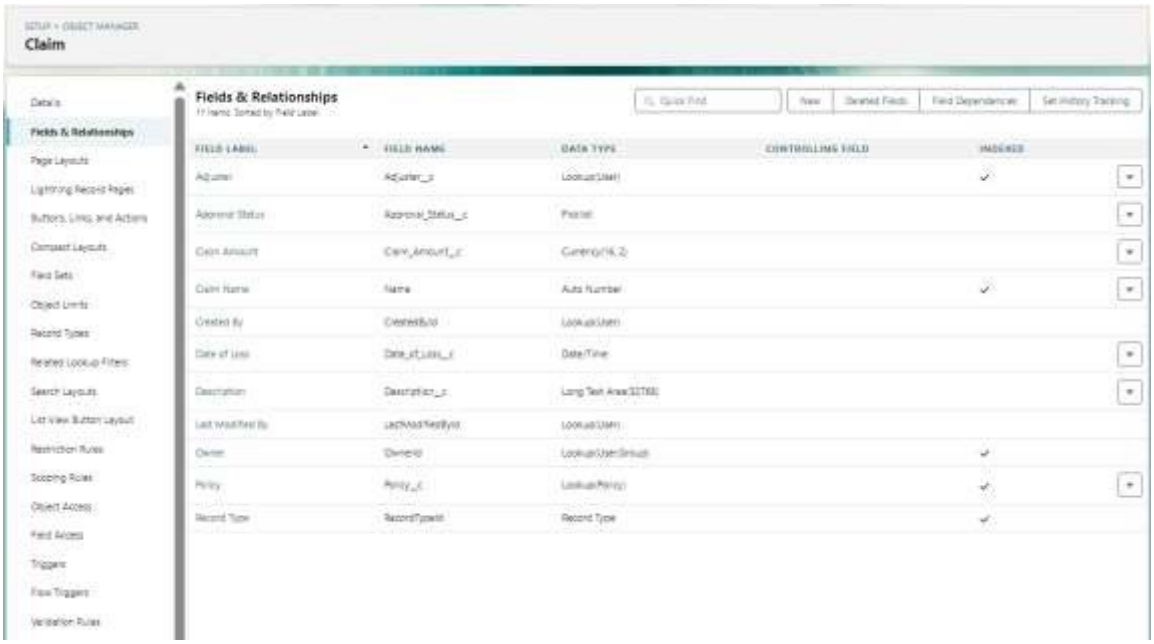

Property:

7. Claim Object Fields

Field	Data Type
Adjuster	Lookup(User)
Approval Status	Picklist: New, Submitted for Approval, Approved, Rejected
Claim Amount	Currency
Date of Loss	Date/Time
Description	Long Text Area
Policy	Lookup(Policy)

6. MILESTONE 1: AUTO QUOTING & POLICY ISSUANCE

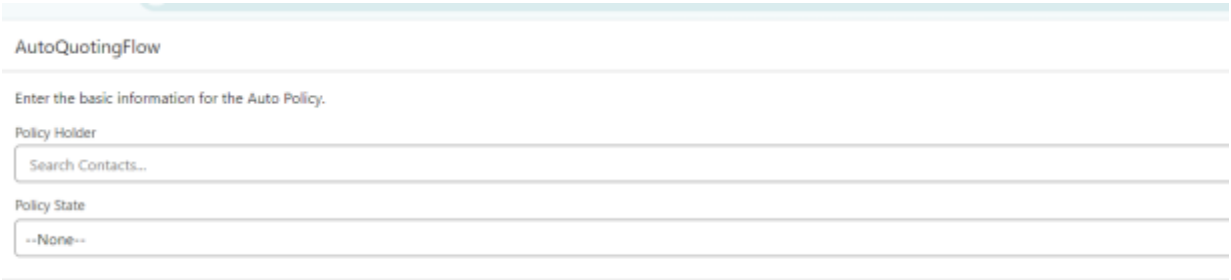

1. Create Auto Quoting Screen Flow

- Go to Setup → Flows → New Flow → Screen Flow.
- Retrieve the Auto Policy Record Type using Get Records.
- Capture Policy Holder, Policy Start Date and Policy State.
- Capture VIN and Model Year on the vehicle details screen.
- Create the draft Policy record and map screen values.
- Store the created Policy Id in a flow variable.
- Save and Activate.

Auto Quoting Screen Flow in Flow Builder

Auto Quoting – Basic Information

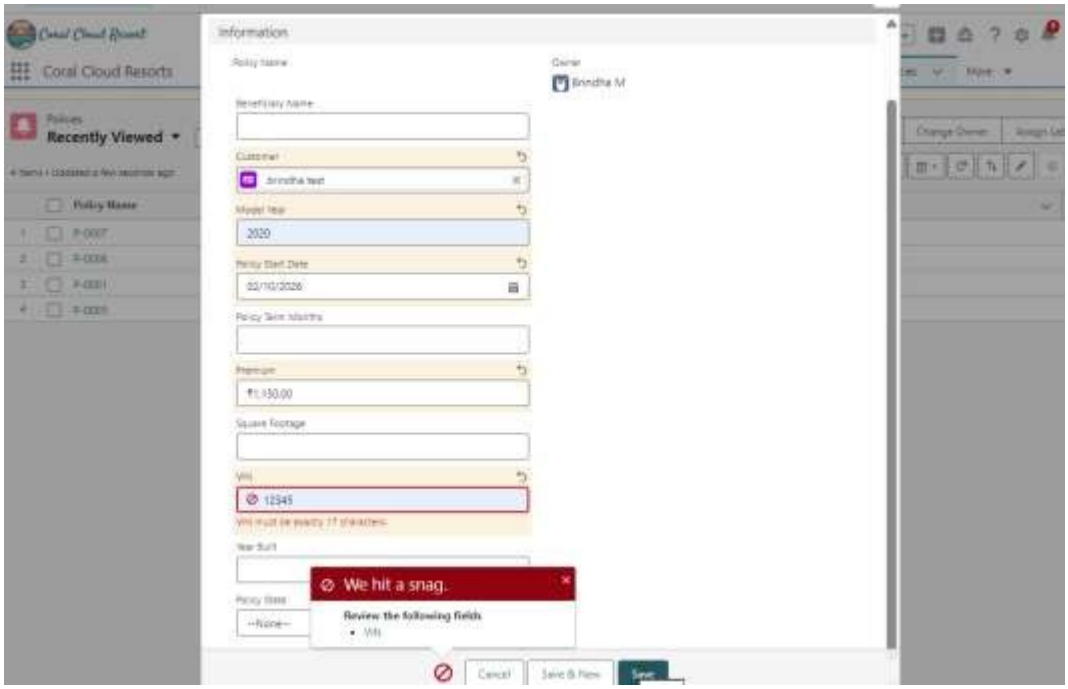

Auto Quoting – Vehicle Details

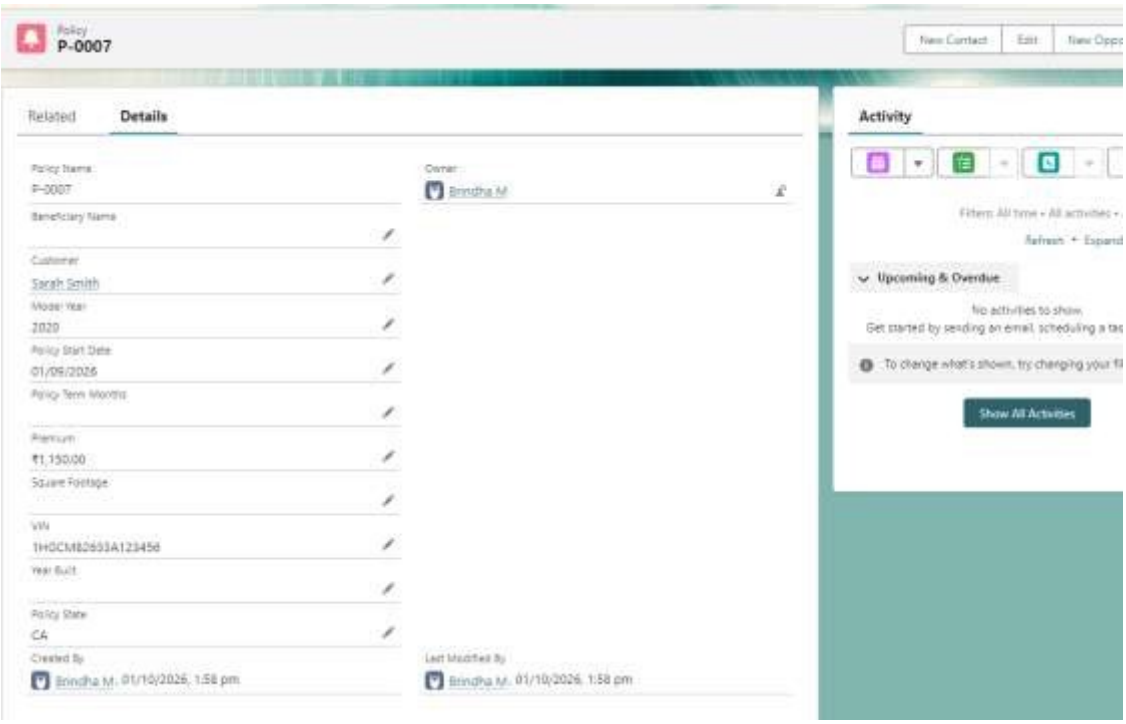

2. VIN Validation

The Policy object uses a validation rule for Auto policies requiring exactly 17 VIN characters. The implemented test with 12345 displays the configured validation error and prevents invalid data from being accepted.

VIN Validation Error for Invalid VIN

Valid Auto VIN and Policy Creation Result

3. Premium Calculation Using Apex

The Premium Calculator Apex class receives the Policy Id, retrieves relevant policy data, calculates the premium using the implemented business rules, and returns the result to the Auto Quoting Flow. The Flow then updates the Premium field.

Premium Calculator Apex Class

Code:

```
public class PremiumCalculator {
    public class PremiumInputWrapper {
        @InvocableVariable(required=true)
        public Id policyId;
    }

    @InvocableMethod(label='Calculate Policy Premium' description='Calculates premium based on po
licy fields (VIN, Model Year, State).')
    public static List<Decimal> calculatePremium(List<PremiumInputWrapper> inputs) {

        List<Decimal> premiumResults = new List<Decimal>();
        Set<Id> policyIds = new Set<Id>();

        for (PremiumInputWrapper input : inputs) {
            if (input.policyId != null) {
                policyIds.add(input.policyId);
            }
        }

        List<Policy__c> policiesToRate = [
            SELECT Id, VIN__c, Model_Year__c, Policy_State__c
            FROM Policy__c
            WHERE Id IN :policyIds
        ];

        for (Policy__c policy : policiesToRate) {
            Decimal basePremium = 1000.00;

            if (policy.Policy_State__c == 'CA') {
                basePremium *= 1.15;
            } else if (policy.Policy_State__c == 'TX') {
                basePremium *= 1.05;
            }

            if (policy.Model_Year__c != null && Integer.valueOf(policy.Model_Year__c) < 2018) {
                basePremium += 100;
            }

            premiumResults.add(basePremium);
        }

        return premiumResults;
```

```
    }
}
```

Premium Calculation Action

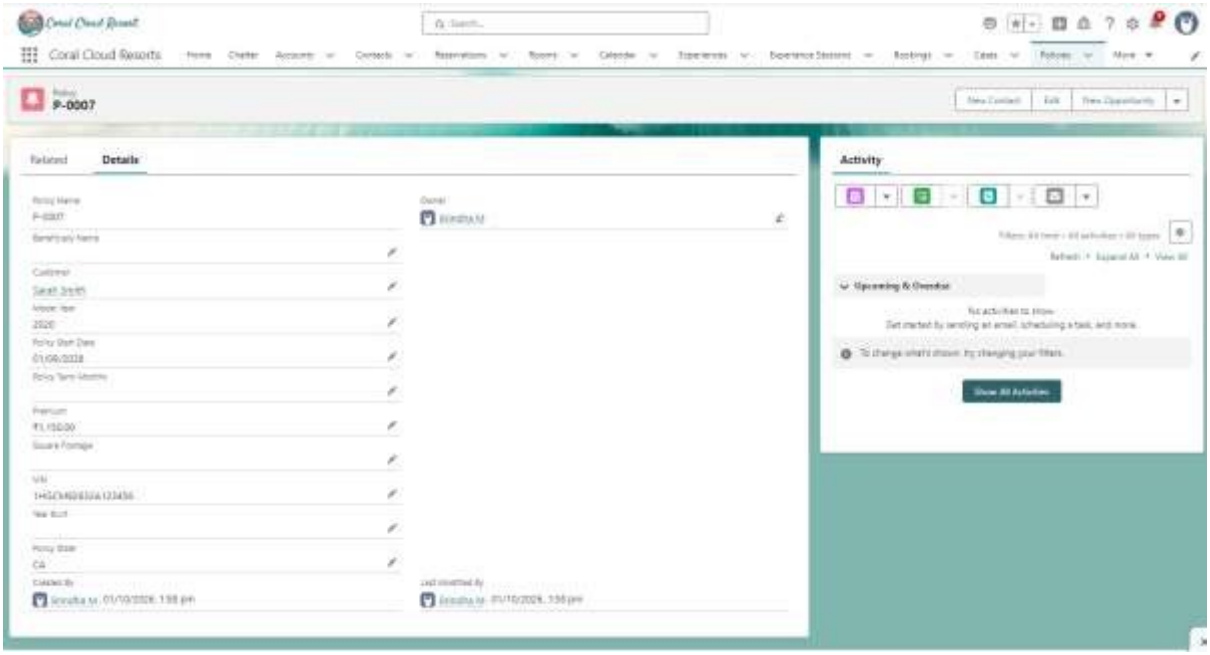

Auto Policy with Calculated Premium

4. Policy Creation Output

A successful Auto Quoting execution creates a Policy containing customer, start date, state, VIN, model year, record type and calculated premium.

Completed Auto Policy

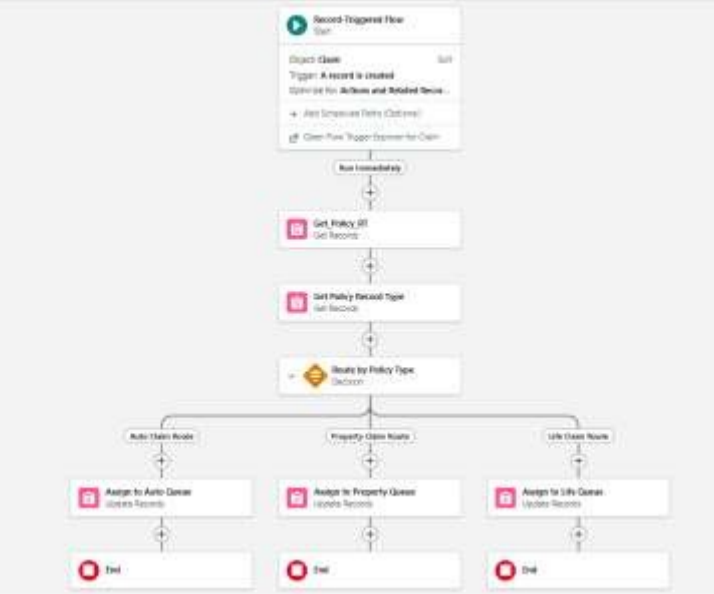

7. MILESTONE 2: CLAIM ROUTING AUTOMATION

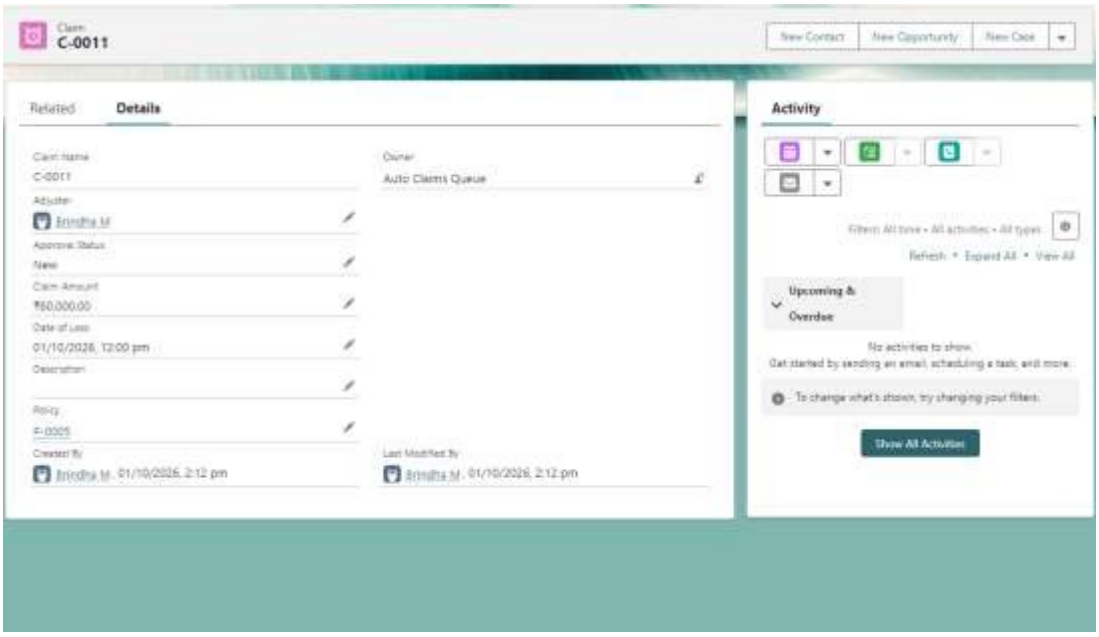

1. Create Record-Triggered Claim Routing Flow

- Create a Record-Triggered Flow on Claim.
- Retrieve the related Policy.
- Evaluate Policy Record Type using a Decision element.
- Create Auto, Property and Life routing outcomes.
- Assign Auto claims to Auto Claims Queue.
- Assign Property claims to Property Claims Queue.
- Assign Life claims to Life Claims Queue.
- Save and Activate.

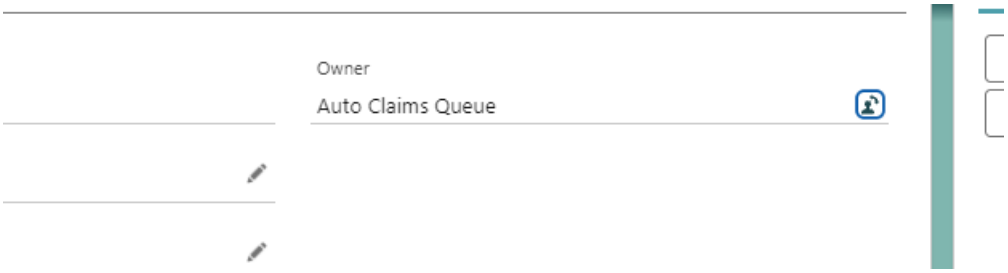

Claim Routing Record-Triggered Flow

Accident Claim Linked to Auto Policy

Auto Claim Routed to Auto Claims Queue

2. Routing Validation

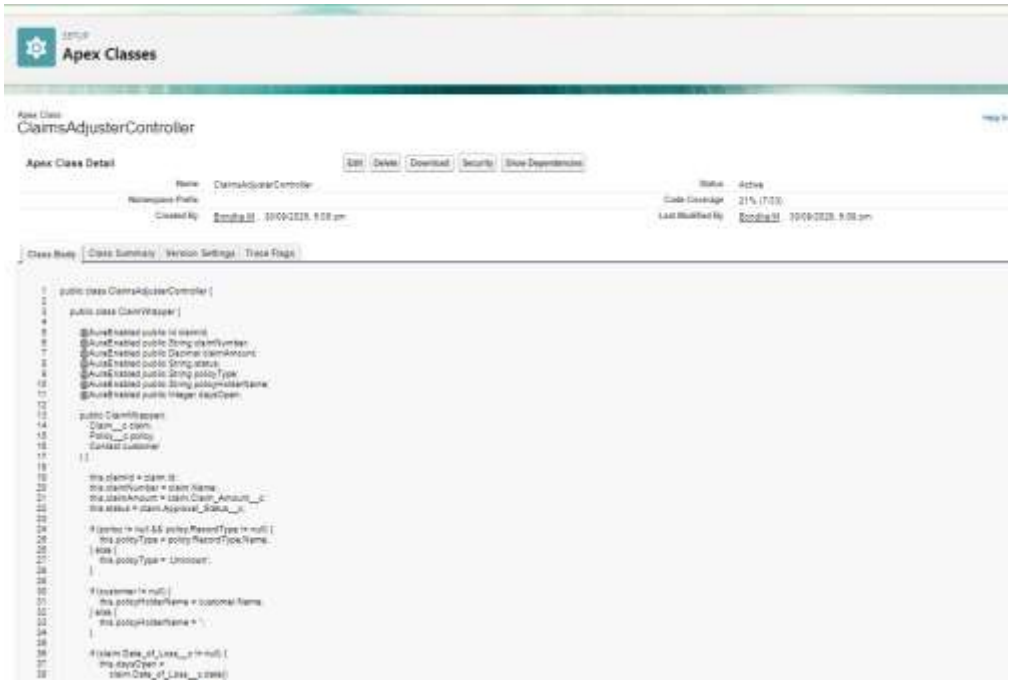

Test	**Expected/Observed Result**
Auto policy claim	Auto Claims Queue – Passed
Property policy claim	Property Claims Queue – Configured
Life policy claim	Life Claims Queue – Configured

8. MILESTONE 3: CLAIMS ADJUSTER LWC DASHBOARD

1. ClaimsAdjusterController Apex Class

The controller retrieves claims owned by the logged-in user and prepares a wrapper containing claim number, claim amount, status, policy type, policy holder name, and days open. Related Policy and Customer data are retrieved for the dashboard.

ClaimsAdjusterController Apex Class

Code:

```
public class ClaimsAdjusterController {

    public class ClaimWrapper {

        @AuraEnabled public Id claimId;
        @AuraEnabled public String claimNumber;
        @AuraEnabled public Decimal claimAmount;
        @AuraEnabled public String status;
        @AuraEnabled public String policyType;
        @AuraEnabled public String policyHolderName;
        @AuraEnabled public Integer daysOpen;

        public ClaimWrapper(
            Claim__c claim,
            Policy__c policy,
            Contact customer
        ) {
```

```
            this.claimId = claim.Id;
            this.claimNumber = claim.Name;
            this.claimAmount = claim.Claim_Amount__c;
            this.status = claim.Approval_Status__c;

            if (policy != null && policy.RecordType != null) {
                this.policyType = policy.RecordType.Name;
            } else {
                this.policyType = 'Unknown';
            }

            if (customer != null) {
                this.policyHolderName = customer.Name;
            } else {
                this.policyHolderName = '';
            }

            if (claim.Date_of_Loss__c != null) {
                this.daysOpen =
                    claim.Date_of_Loss__c.date()
                    .daysBetween(Date.today());
            } else {
                this.daysOpen = 0;
            }
        }
    }

    @AuraEnabled(cacheable=true)
    public static List<ClaimWrapper> getAssignedClaims() {
        List<ClaimWrapper> results =
            new List<ClaimWrapper>();
        List<Claim__c> claims = [
            SELECT
                Id,
                Name,
                Claim_Amount__c,
                Approval_Status__c,
                Date_of_Loss__c,
                Policy__r.Name,
                Policy__r.RecordType.Name,
                Policy__r.Customer__r.Name
            FROM Claim__c
```

```
            WHERE OwnerId = :UserInfo.getUserId()
            ORDER BY Date_of_Loss__c DESC
        ];

        for (Claim__c claim : claims) {

            Policy__c policy = claim.Policy__r;

            Contact customer =
                (policy != null && policy.Customer__r != null)
                ? policy.Customer__r
                : null;

            results.add(
                new ClaimWrapper(
                    claim,
                    policy,
                    customer
                )
            );
        }

        return results;
    }
}
```

2. Claims Dashboard LWC

Claims Dashboard LWC – Full Dashboard

- Create claimsDashboardLwc.
- Expose it for Lightning App, Home and Record pages as required.
- Use @wire to call getAssignedClaims.
- Display assigned claims using reusable claim tiles.
- Provide All, Auto, Property and Life filtering.
- Display the total number of visible assigned claims.

Claims Dashboard Filtering

<u>Code:</u> claimsDashboardLwc.html

```
<template>
    <lightning-card
        title="My Assigned Claims Dashboard"
        icon-name="standard:case">

        <div class="slds-m-around_medium">

            <lightning-combobox
                name="policyFilter"
                label="Filter by Policy Type"
                value={selectedPolicyType}
                options={policyTypeOptions}
                onchange={handleFilterChange}>
            </lightning-combobox>
```

```
        <template if:true={visibleClaims}>

            <div class="slds-grid slds-wrap slds-m-top_medium">

                <template
                    for:each={visibleClaims}
                    for:item="claim">

                    <div
                        key={claim.claimId}
                        class="slds-col slds-size_1-of-1
                            slds-medium-size_1-of-2
                            slds-large-size_1-of-3
                            slds-p-around_small">

                        <c-claim-tile-lwc
                            claim={claim}>
                        </c-claim-tile-lwc>

                    </div>

                </template>

            </div>

            <p class="slds-m-top_medium slds-text-heading_small">
                Total Claims Assigned:
```

```
                {visibleClaims.length}
            </p>

        </template>

        <template if:false={visibleClaims}>
            <p>No claims currently assigned to you.</p>
        </template>

    </div>

  </lightning-card>
</template>
```

3. Reusable Claim Tile LWC

The claim tile displays Claim Number, Policy Type, Policy Holder, Claim Amount, Status and Days Open. It also selects an icon based on the policy type.

Code: claimTitleLwc.html

```
<template>

  <div class="slds-box slds-theme_default">

    <h2 class="slds-text-heading_medium">
        Claim: {claim.claimNumber}
    </h2>

    <p>
        <strong>Policy Type:</strong>
        {claim.policyType}
    </p>
```

```
        <p>
            <strong>Policy Holder:</strong>
            {claim.policyHolderName}
        </p>

        <p>
            <strong>Claim Amount:</strong>
            ₹ {claim.claimAmount}
        </p>

        <p>
            <strong>Status:</strong>
            {claim.status}
        </p>

        <p>
            <strong>Days Open:</strong>
            {claim.daysOpen}
        </p>

    </div>

</template>
```

<u>Code:</u> claimTileLwc.js

Code:claimTileLwc.js-meta.xml

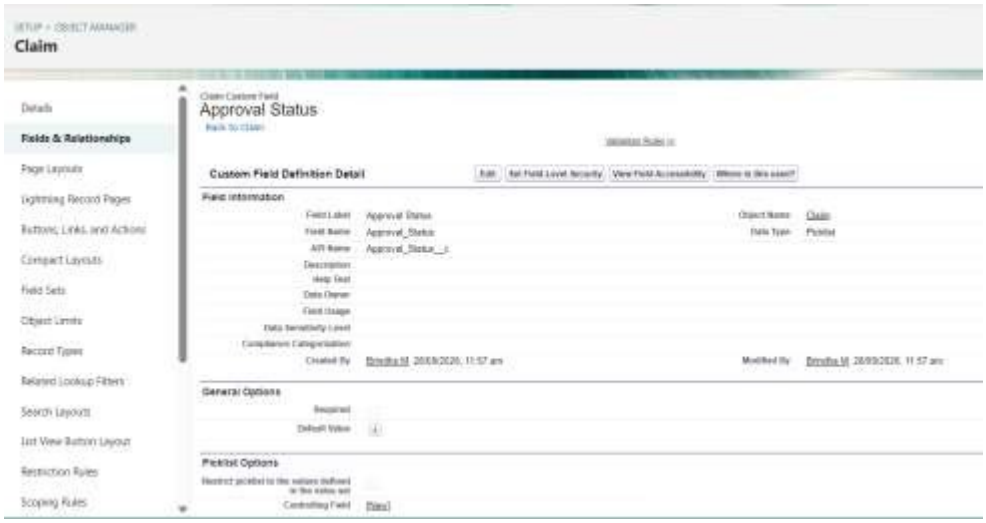

```
force-app > main > default > lwc > claimTileLwc > claimTileLwc.js-meta.xml
1  <?xml version="1.0" encoding="UTF-8"?>
2  <LightningComponentBundle xmlns="http://soap.sforce.com/2006/04/metadata">
3
4      <apiVersion>67.0</apiVersion>
5
6      <isExposed>false</isExposed>
7
8  </LightningComponentBundle>
```

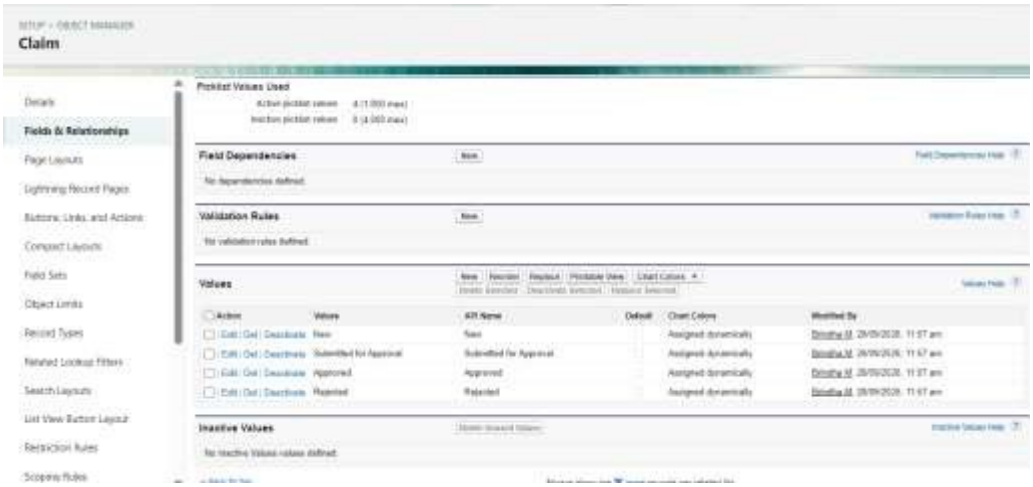

9. MILESTONE 4: ADVANCED CLAIM PROCESSING & APPROVAL

1. Approval Status Field

Claim Approval Status is maintained as New, Submitted for Approval, Approved, or Rejected to track the approval lifecycle.

Claim Approval Status Field

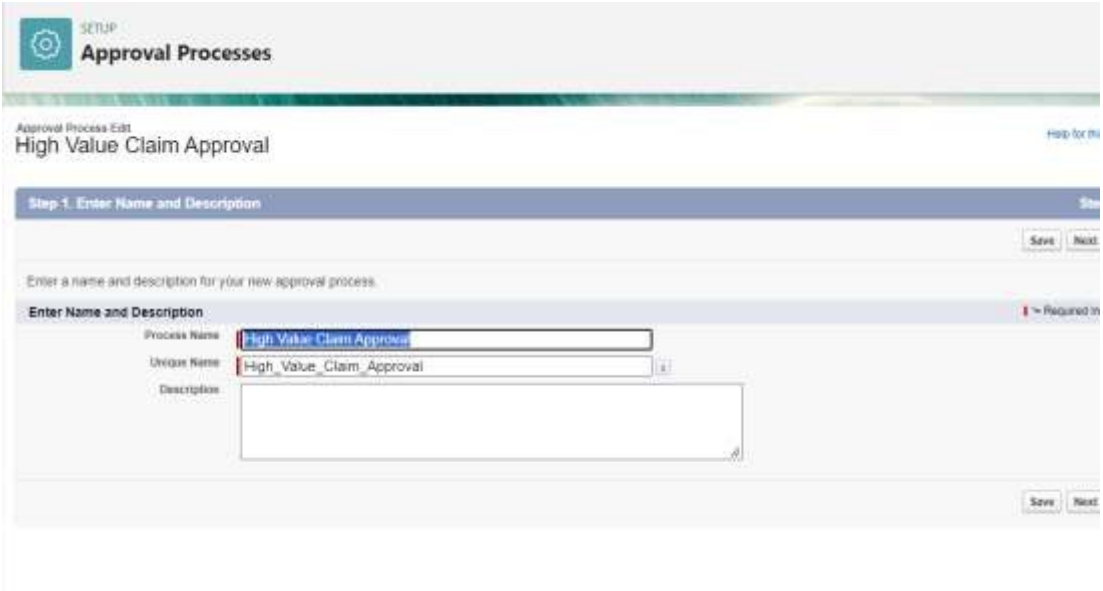

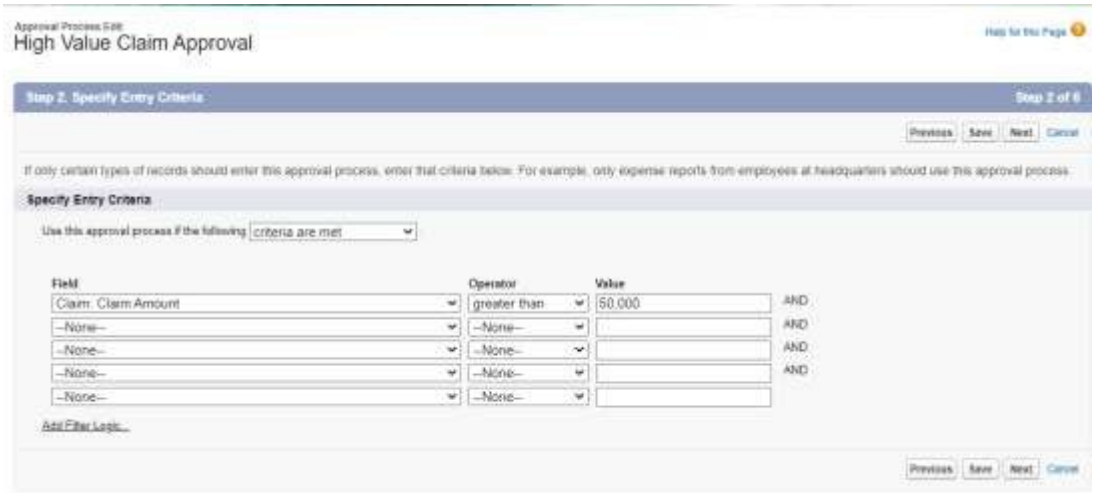

2. High-Value Claim Approval Process

- Open Setup → Approval Processes and select Claim.
- Create High Value Claim Approval.
- Set entry criteria: Claim Amount greater than ₹50,000.
- Allow the Claim owner as initial submitter.
- Create Step 1 for Senior Adjuster.
- Create Step 2 for Department Manager.
- Configure the steps sequentially.
- Update Approval Status to Submitted for Approval on submission.
- Update to Approved on final approval.
- Update to Rejected on final rejection.
- Activate.

Step 1: *High-Value Claim Approval Process Configuration*

Under specify entry criteria, Select criteria are met

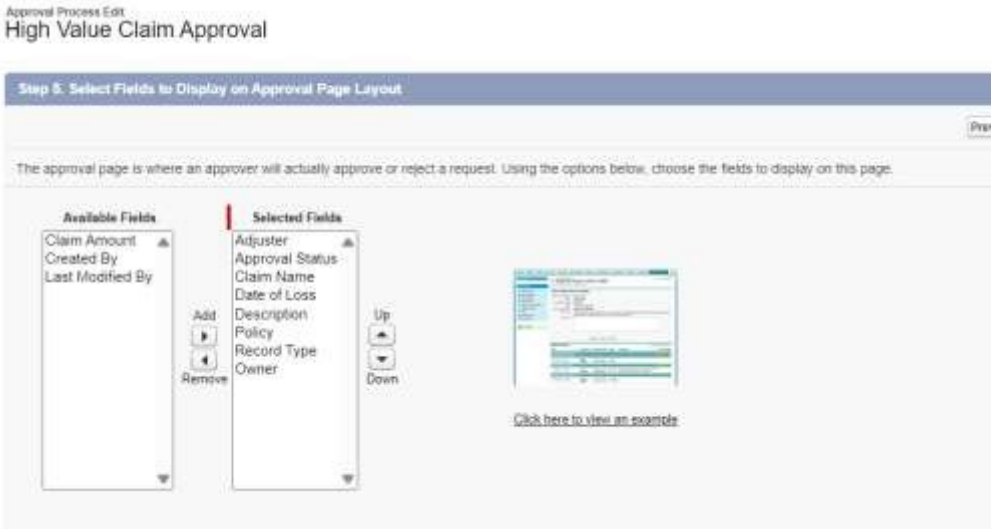

Under Record Editability properties, Select Administrators ONLY can edit the records during the approval process

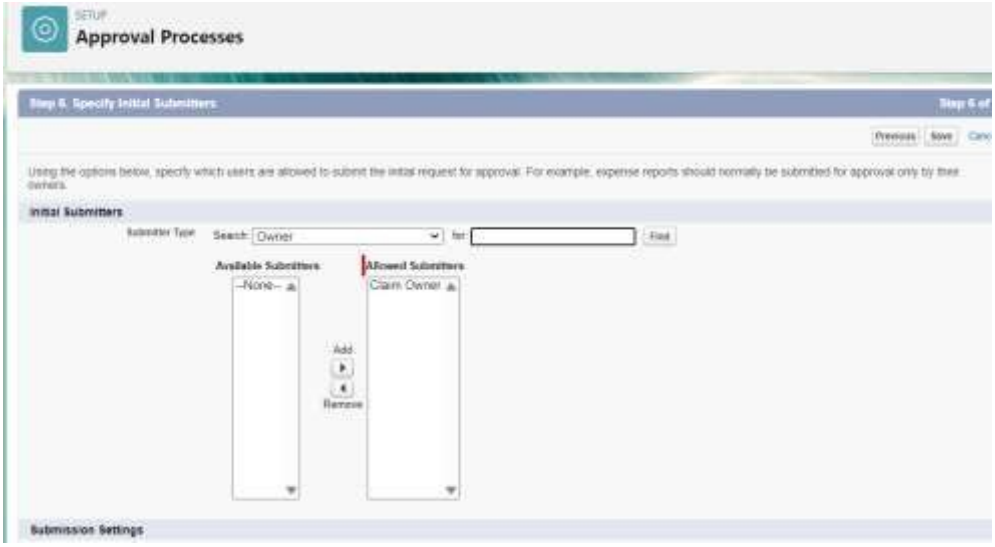

Under Initial Submitters, Search for owner under submitter type, and select the claim owner as allowed submitters from available submitters

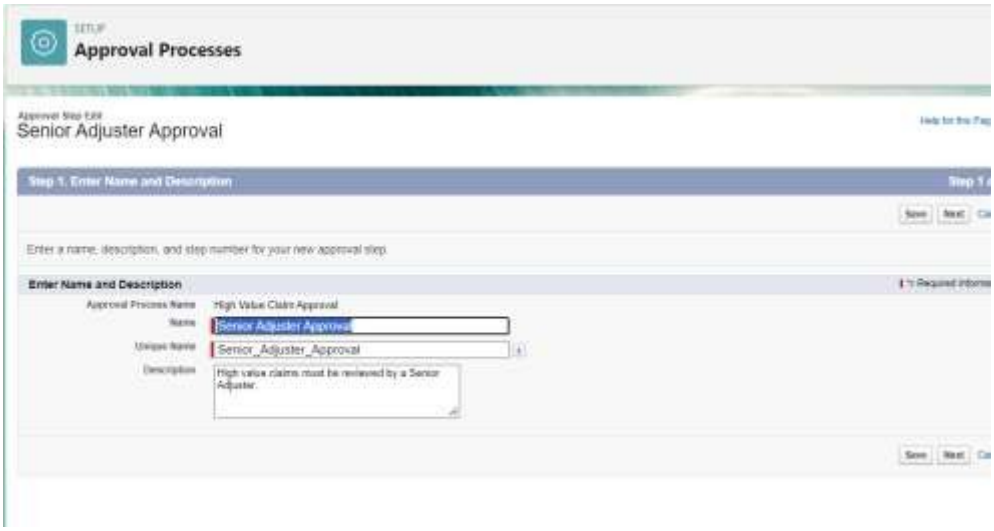

Under Approval Page Layout, Select Claim Number, Owner, Claim Amount, Adjuster, Policy fields to the selected fields from available fields

<u>Step 2:</u> Senior Adjuster Approval Step

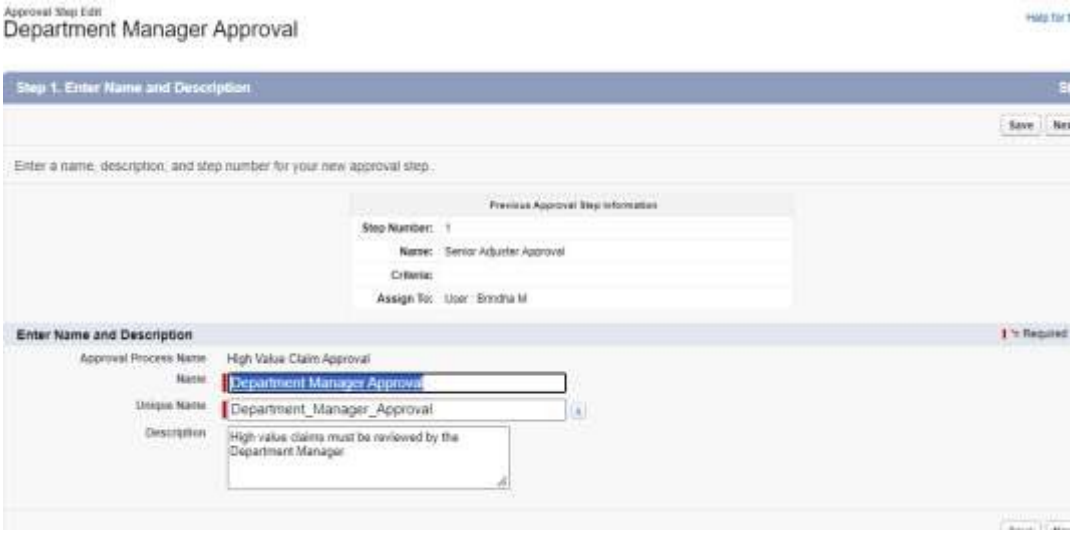

Under specify step criteria, Select all records should enter the step

Same as the Department Manager Approval

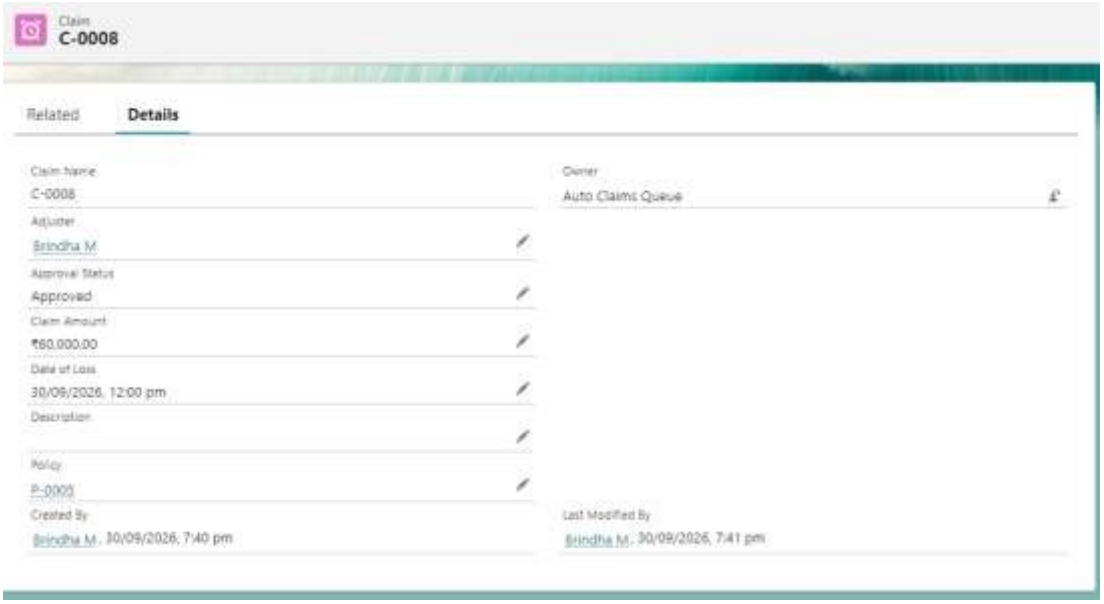

3. Automatic High-Value Submission

A Record-Triggered Flow checks Claim Amount greater than ₹50,000 and Approval Status equal to New. When the conditions are met, it submits the record to High Value Claim Approval automatically.

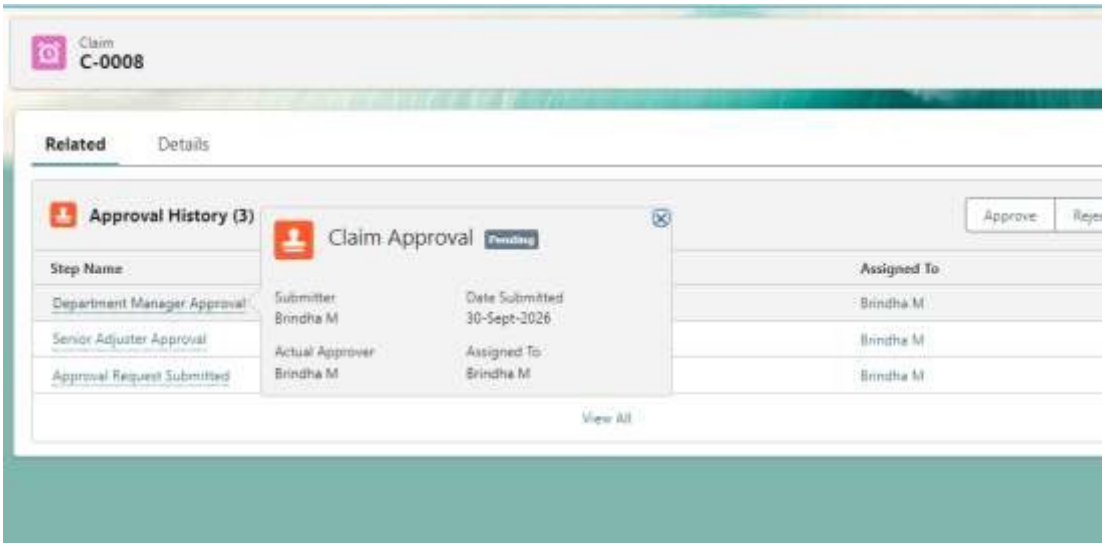

Automatic High-Value Submission Flow

₹60,000 High-Value Claim

High-Value Claim Pending Approval

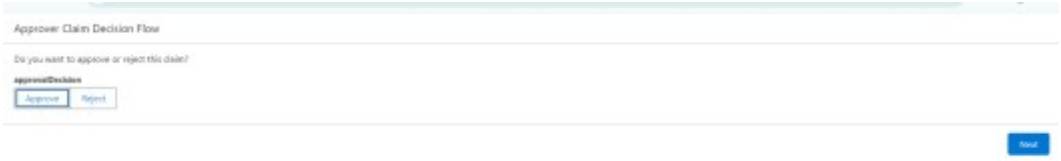

4. Approver Screen Flow

- Create a Screen Flow with input variable recordId.
- Get the Claim record.
- Display Claim Number, Amount and Policy Type.
- Provide Approve and Reject choices.
- Capture Approver Comments.
- Use Decision to determine the selected action.
- Execute the configured approval/rejection action.
- Save and Activate.

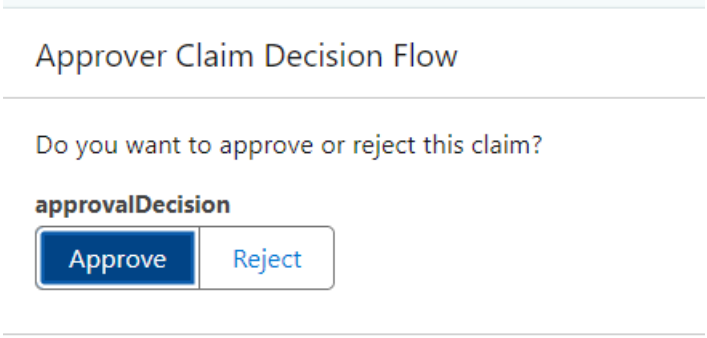

Approver Screen Flow

Approver Review Screen

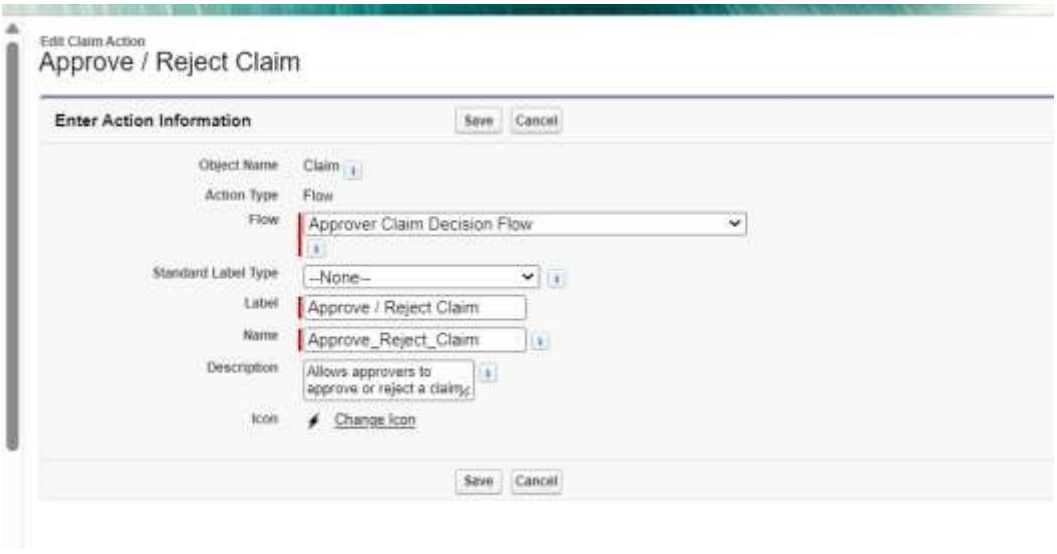

Approve/Reject Decision

5. Quick Action

An Approve/Reject Claim Flow Quick Action is placed on the Claim Lightning record page so authorized approvers can launch the review process directly from the record.

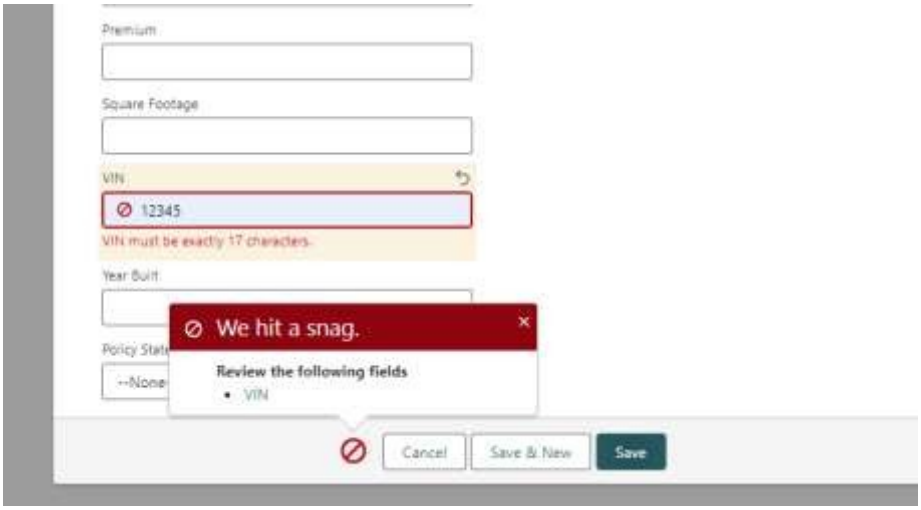

Approve/Reject Claim Quick Action

10. TESTING & VALIDATION

Test Case	Scenario	Expected Result	Status
TC-01	Invalid VIN 12345	VIN must be exactly 17 characters	Pass
TC-02	Auto policy Accident claim	Auto Claims Queue	Pass
TC-03	Normal approval	Approved	Pass
TC-04	₹60,000 claim	Submitted/Pending approval	Pass
TC-05	Senior Adjuster approval	First stage completed	Pass
TC-06	Department Manager approval	Approved	Pass
TC-07	Rejection	Rejected	Pass

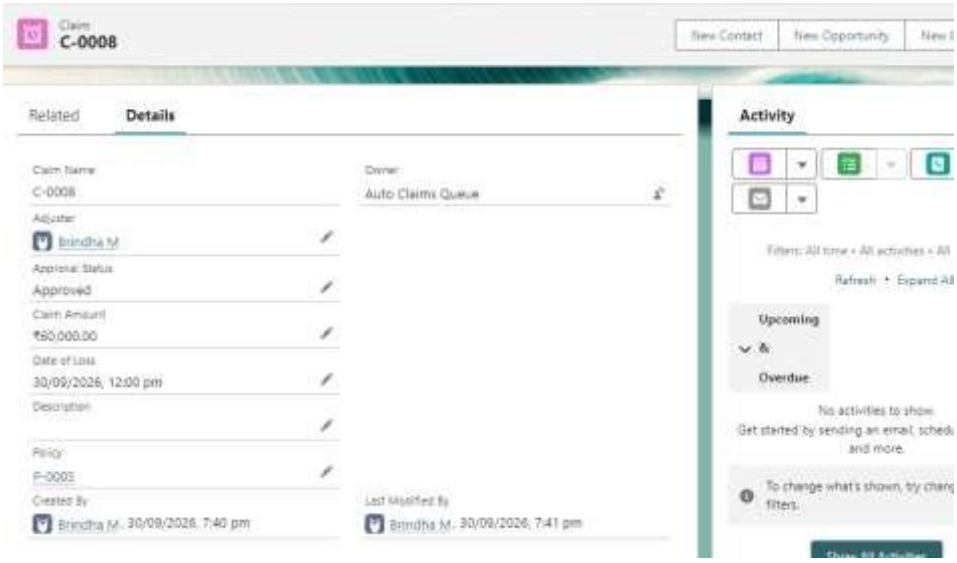

Invalid VIN Validation

Auto Claim Routing

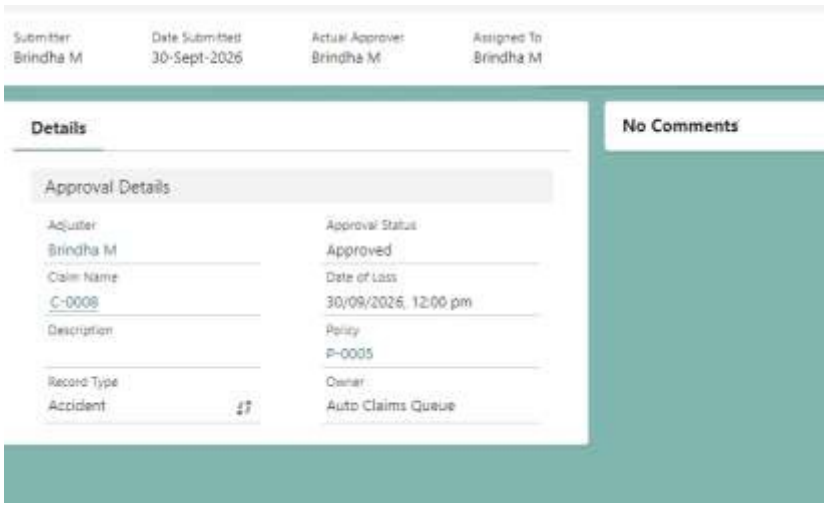

Normal Claim Approval

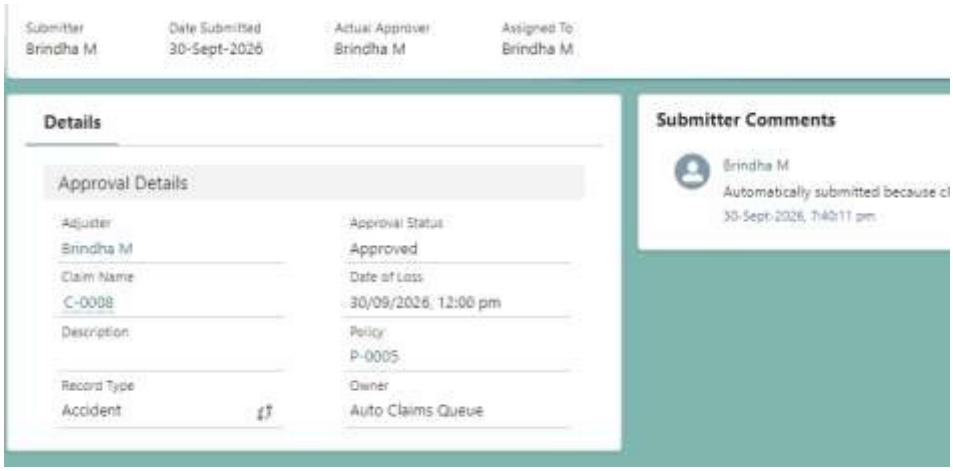

₹60,000 Pending Approval

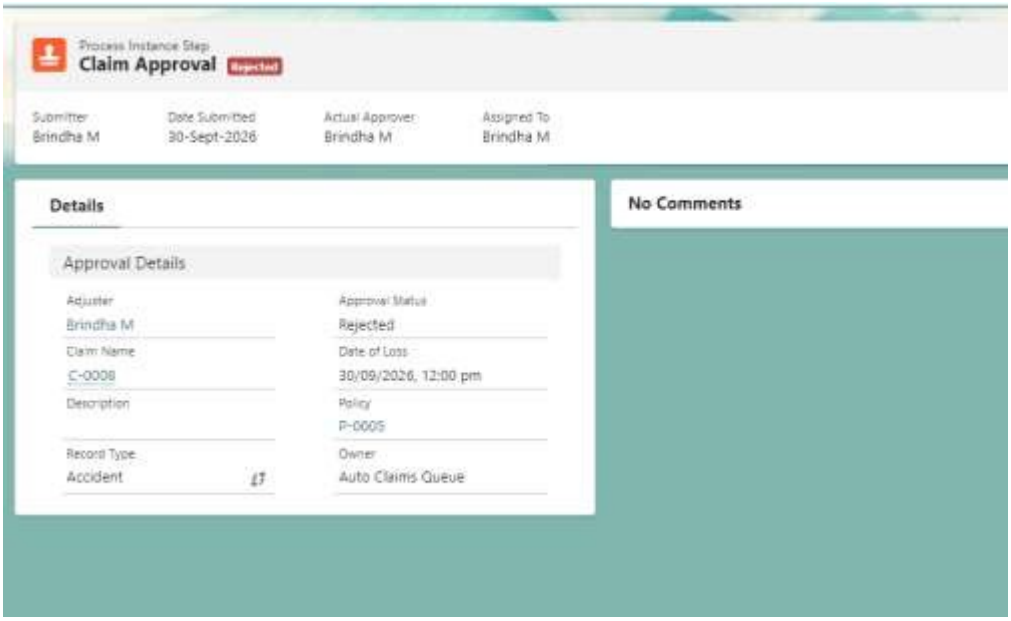

Senior Adjuster Approval

Department Manager Approval

Rejected Claim

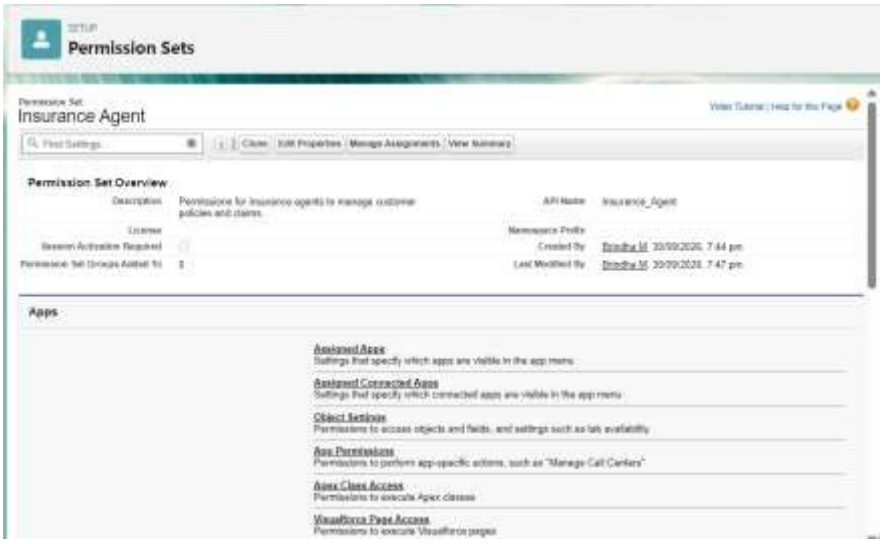

11. SECURITY & ACCESS CONTROL

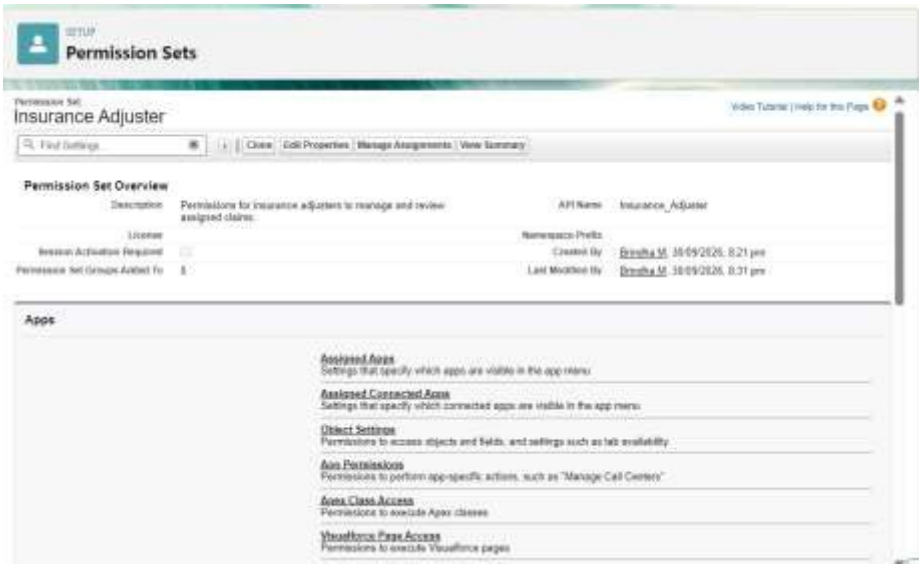

1. Permission Sets

Permission Set	Responsibility
Insurance Agent	Policy creation and quoting
Insurance Adjuster	Assigned claim review and handling
Insurance Manager	Claim management, reporting and approvals

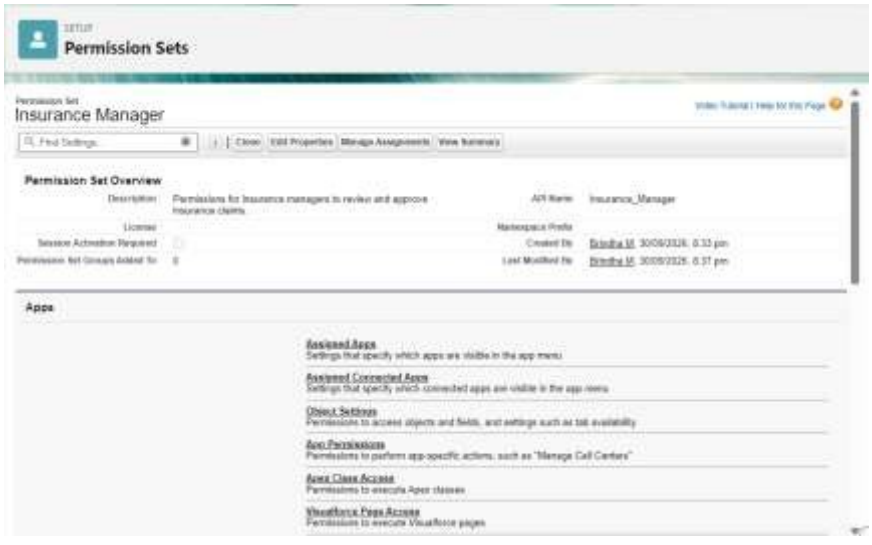

Insurance Agent Permission Set

Insurance Adjuster Permission Set

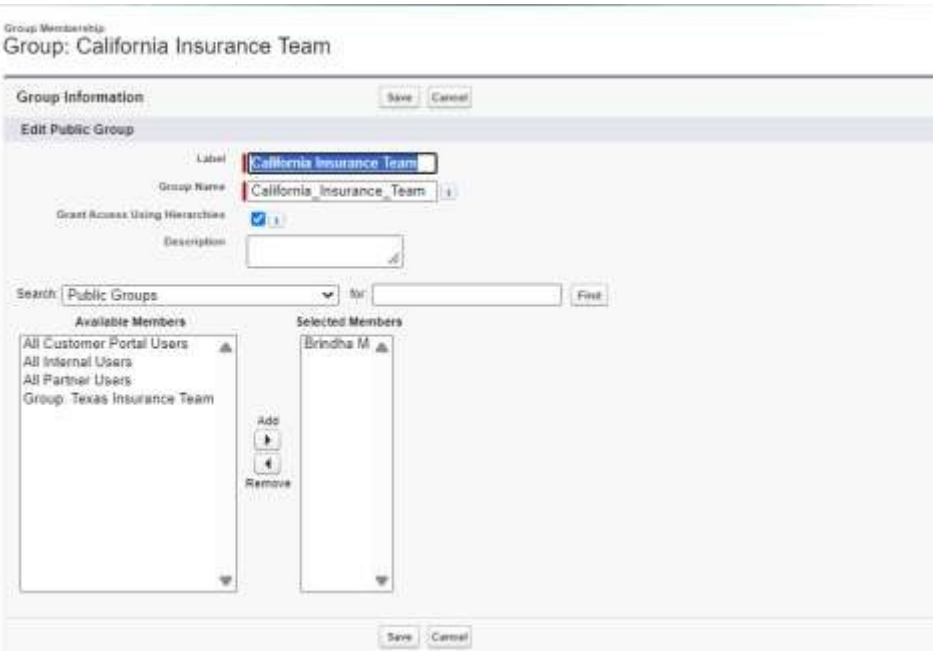

Insurance Manager Permission Set

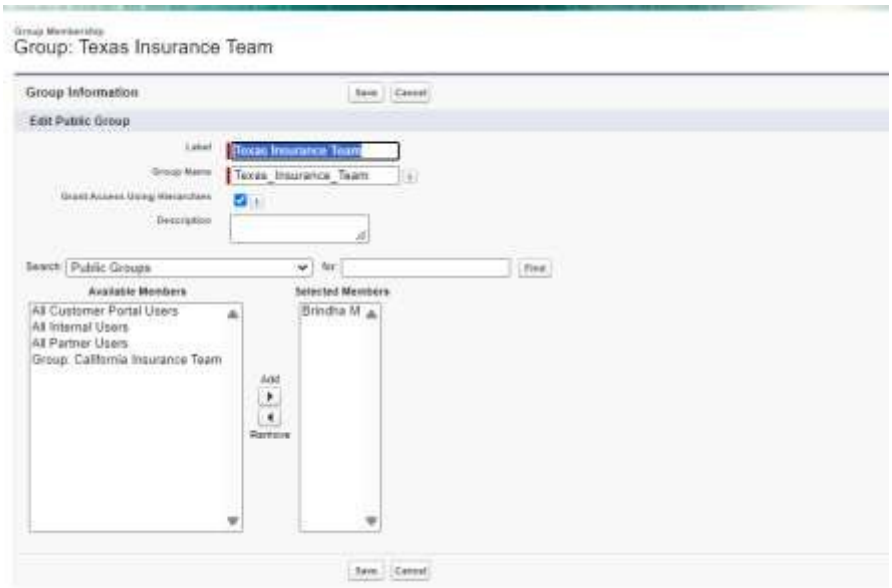

2. State-Based Sharing

California and Texas state-based sharing configurations were created using public groups and sharing rules to control access to relevant records.

California Insurance Team

Texas Insurance Team

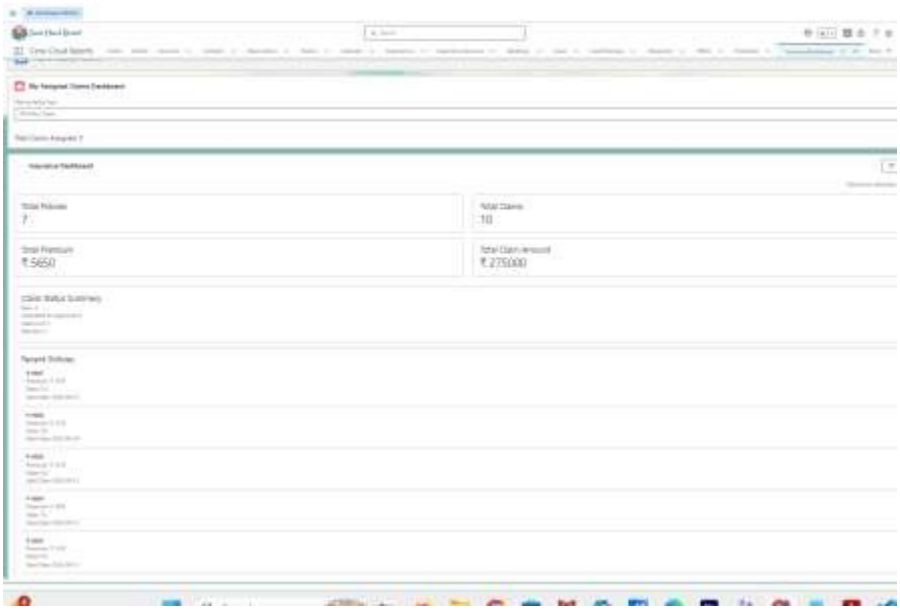

12. RESULTS & OUTCOMES

- Centralized Vehicle, Property and Life policy and claim management.
- Guided Auto Quoting.
- 17-character VIN validation.
- Apex premium calculation.
- Automatic claim queue routing.
- LWC Claims Dashboard and filtering.
- High-value approval above ₹50,000.
- Sequential Senior Adjuster and Department Manager approval.
- Approve/Reject handling.
- Role-specific Permission Sets.
- California/Texas state-based sharing.
- Core scenarios successfully validated.

13. DEMONSTRATION SEQUENCE

Overall Application

- Open Salesforce insurance application.
- Show Policy and Claim objects.
- Show Vehicle, Property and Life Record Types.
- Run Auto Quoting Flow.
- Demonstrate invalid VIN.
- Create valid Auto Policy.

- Show premium.
- Create Accident Claim and show Auto Claims Queue routing.
- Open Claims Dashboard and apply filter.
- Open ₹60,000 claim and show pending approval.
- Show Senior Adjuster approval.
- Show Department Manager approval.
- Demonstrate rejection.
- Show Permission Sets and state sharing.
- Show reports and architecture.

Project Architecture:

User → Salesforce UI → Screen Flow → Policy/Claim Objects → Apex → Record-Triggered Flow → Approval Process → LWC Dashboard → Security/Sharing

14. CONCLUSION

The Multi-Line Insurance Policy and Claims Management System demonstrates a centralized Salesforce solution for multiple insurance products and claims. The implementation combines data modeling, guided Screen Flows, Apex logic, Record-Triggered automation, LWC, Approval Processes, Permission Sets and state-based sharing.

The completed solution supports policy creation, Auto quoting, VIN validation, premium calculation, claim routing, dashboard visibility, high-value approval, rejection handling and controlled access. The tested scenarios confirm the core implemented workflows.

15. FUTURE ENHANCEMENTS

- External VIN/vehicle data services.
- Customer self-service portal.
- Document upload and classification.
- Email/SMS notifications.
- Fraud detection and risk scoring.
- Additional insurance products.
- Territory/branch sharing.
- CRM Analytics.
- SLA monitoring and escalation.
- Payment, repair and third-party integrations.

Project Development Phase

Product Backlog, Sprint Schedule, and Estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Core Data Model & Policy Configuration	USN-1	As an administrator, I want to create Policy and Claim objects, record types, fields, field sets, and relationships so that Vehicle, Property, and Life insurance data can be managed systematically.	5	High	Balaji V
Sprint-2	Policy Quoting & Validation	USN-2	As an insurance agent, I want to use an Auto Quoting Screen Flow to capture policy holder, policy date, state, VIN, and model year so that an Auto policy can be created through a guided process.	5	High	Sanjayan P
Sprint-2	Policy Quoting & Validation	USN-3	As a system, I want to validate that an Auto policy VIN contains exactly 17 characters so that invalid vehicle information is prevented.	2	High	Vimalraj SK
Sprint-3	Premium Calculation & Claim Routing	USN-4	As a system, I want Apex to calculate the policy premium based on policy information so that premium values are calculated automatically.	5	High	Raja I
Sprint-3	Premium Calculation & Claim Routing	USN-5	As a system, I want to automatically route claims to the correct Auto, Property, or Life claims queue so that claims are assigned to the appropriate team.	5	High	Balaji V
Sprint-4	Claims Dashboard & Processing	USN-6	As a claims adjuster, I want an LWC dashboard showing my assigned claims with policy type, claimant, amount, status, and days open so that I can efficiently monitor claims.	5	High	Mohesh R
Sprint-5	High-Value Claim Approval	USN-7	As a system, I want claims above ₹50,000 to automatically enter the approval process so that high-value claims receive appropriate authorization.	5	High	Vimalraj SK

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-5	High-Value Claim Approval	USN-8	As a Senior Adjuster and Department Manager, I want sequential approval of high-value claims so that claims are reviewed at the required approval levels.	5	High	Raja I
Sprint-6	Security, Reporting & Final Validation	USN-9	As an insurance manager, I want role-based access, state-based sharing, reports, and dashboards so that insurance operations can be securely monitored and managed.	4	Medium	Sanjayan P

Project Tracker, Velocity & Burndown Chart

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	5	1 Day	28 Sep 2026	28 Sep 2026	6	28 Sep 2026
Sprint-2	8	1 Day	29 Sep 2026	29 Sep 2026	7	29 Sep 2026
Sprint-3	10	1 Day	30 Sep 2026	30 Sep 2026	10	30 Sep 2026
Sprint-4	5	1 Day	01 Oct 2026	01 Oct 2026	5	01 Oct 2026
Sprint-5	10	1 Day	02 Oct 2026	02 Oct 2026	10	02 Oct 2026
Sprint-6	4	1 Day	02 Oct 2026	02 Oct 2026	4	02 Oct 2026

16. APPENDIX – PROJECT COMPONENT SUMMARY

Module	Salesforce Component
Policy Management	Policy Object, Record Types, Fields, Field Sets
Quoting	Auto Quoting Screen Flow
Validation	VIN Validation Rule
Premium	Premium Calculator Apex
Claims	Claim Object, Record Types, Policy Relationship
Routing	Record-Triggered Claim Routing Flow
Dashboard	Claims Dashboard LWC and Claim Tile LWC

Approval	High Value Claim Approval Process
Submission	High-Value Submission Flow
Approver	Claim Approver Screen Flow
Actions	Approve/Reject Claim Quick Action
Security	Permission Sets and State-Based Sharing
Reporting	Salesforce Reports and Dashboards
